

4GROUND

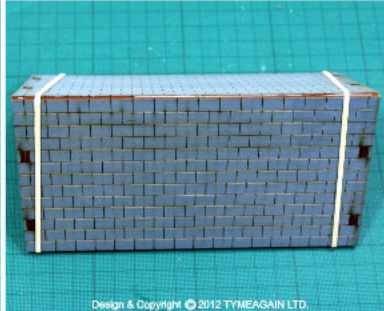

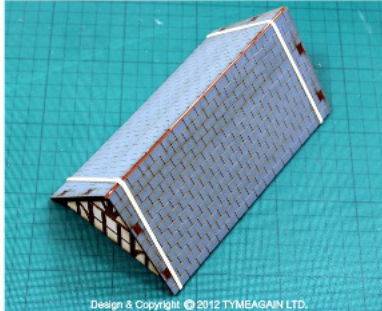

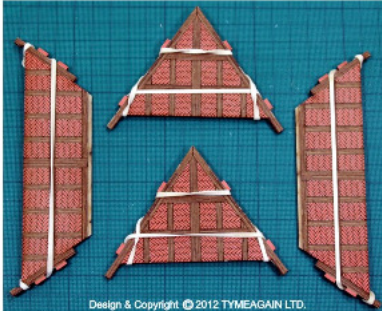

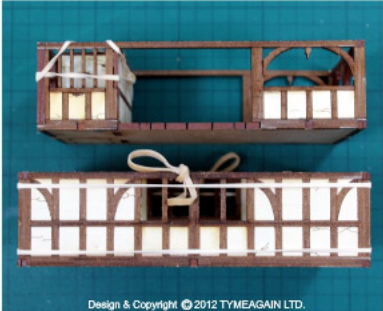

Rubber Bands... possibly the best, and most definitely the cheapest modelling clamps known to man!

With all our models, having a few rubber bands to hand for stretching around and about parts of the model as it dries is no bad thing. With our double sided detailed and larger more complicated models

they really do become almost a must have. Above you will see that external walls have been easily held in place with rubber bands giving the PVA glue time to go off. Looping a band through a window

and tying it off again keeps both parts under tension as it glues. Here the same has been done with the inside and outside of the roof sections before assembling them with the roof. Again the roof with all its parts glued in place is held together as it dries with two rubber bands. There are many clamps that really help the advanced modeller but all advanced modellers still have rubber bands in their tool kit.
